

Course Assessment Test

Course Title	Continuous Integration (CI) / Continuous Delivery (CD) with Jenkins & BitBucket	Date	Apr 2026
Name		Dept	

- 1) This assessment test is to be given out before course commencement. Answers are to be filled in column entitled "Pre-Course Answer"
- 2) At the end of the course, the same assessment sheet is to be given out where answers are to be filled in column entitled "Post-Course Answer". Instructor will then share the answers and participants need to total the score in both "Pre" and "Post" columns through self-marking.
- 3) Assessment sheets will be collected for filling.

No	Question	Pre-Course Answer	Post-Course Answer
1	What are the main DevOps CI/CD related activities that a Jenkins automation server will perform? i. Building (compiling) application code ii. Testing build artifacts (binary executables, etc) iii. Monitoring build artifacts (binary executables, etc) iv. Deploying build artifacts (binary executables, etc) a) Activities i, ii and iii b) Activities i, ii and iv c) Activities ii, iii and iv d) All activities listed		B
2	Jenkins achieves its functionality primarily through a) A client-server architecture where API calls are made from various tools to the Jenkins controller b) A push-pull architecture that allows other DevOps tools to communicate with it c) A pipeline of plugins that perform a variety of CI/CD related tasks d) Callbacks from triggers that are initiated from a cloud based code repo such as GitHub or Bit Bucket		C
3	All of the following statements are true EXCEPT: a) A Jenkins master requires at least one agent node to execute a build b) Jenkins agent nodes can run a variety of OS and / or build environments c) Jenkins agents can be configured to only perform execution of certain tasks d) Jenkins master sends notifications via emails after a build failure event		A
4	In Jenkins, what is the main purpose of a freestyle project? a) To automatically discover branches from a Git hosting platform b) To replace the need for plugins entirely c) To store Jenkins controller configuration as code		D

Course Assessment Test

	d) To define a manually configured job with build steps and post-build actions		
5	What is the most accurate statement that distinguishes between “Build periodically” and “Poll SCM” configuration for a given job? a) Both always behave identically and trigger builds every time b) Build periodically always runs on a timer, while Poll SCM checks for source changes and builds only if changes are detected c) Poll SCM always triggers faster than webhooks d) Build periodically only works with Pipeline jobs		B
6	Which trigger is usually the most responsive for starting a Jenkins build after a developer pushes a commit? a) Manual Build Now b) Build periodically c) Poll SCM every few minutes d) Repository webhook triggering Jenkins server		D
7	Which statement about Maven in Jenkins is the most accurate? a) Maven is a build tool, while Jenkins orchestrates when and how the build is run b) Maven augments email notification functionality in Jenkins c) Maven allows a proper link between source control systems like GitHub and Jenkins d) Maven is a core plugin that is part of Jenkins architecture, on which other plugins are automatically installed on and rely on		A
8	What is the primary difference between a pipeline and a freestyle project? a) A pipeline cannot use plugins, while a freestyle project can b) A pipeline uses DSL syntax, while a freestyle project is mainly configured through the UI c) A pipeline provides optimal configuration when outputs need to be chained between multiple jobs, while this is not possible in freestyle projects d) A pipeline provides a much easier way to reference a source repo (such as GitHub), which is much more difficult to accomplish via a freestyle project		B
9	What is the standard name of the text file used to define a pipeline? a) Pipeline.txt b) Pipeline.yaml c) Jenkinpipeline.groovy d) Jenkinsfile		D
10	What is considered best practice in Jenkins when working with pipelines? a) Create and define pipeline scripts using the Jenkins UI b) Store pipeline scripts in SCM (GitHub, BitBucket) so that they are version controlled along with the application source code c) Configure pipeline scripts with declarative rather than scripted syntax when the		B

Course Assessment Test

	complexity of the pipeline is minimal d) Use pipeline scripts specifically when chaining between multiple projects is required
